

Offers

An offer defines the free round configuration that will be applied to each grant issued from it.

Endpoints

Method	Path	Description
POST	<code>/offers/fixed-bet</code>	Create fixed bet offer
POST	<code>/offers/bet-range</code>	Create bet range offer
GET	<code>/offers/{offerId}</code>	Get offer details
GET	<code>/offers</code>	List offers (paginated)
DELETE	<code>/offers/{offerId}</code>	Delete offer (only if no grants)

Response Differences

The two offer types return different response shapes:

Field	fixed-bet response	bet-range response
<code>rounds</code>	Present (from request)	Not present
<code>bet</code>	Present (fixed amount)	Not present
<code>min_bet</code>	Not present	Present
<code>max_bet</code>	Not present	Present

`free_round_balance`

Present (computed: rounds x bet)

Present (from request)

Create Fixed Bet Offer

`POST /offers/fixed-bet`

The operator configures a fixed bet amount per round. The system computes the free round balance as `rounds x bet`.

Request Fields

Name	Type	Mandatory	Description
offer_id	String	Yes	Unique ID (idempotency key, max 64 chars)
campaign_id	String	No	Campaign to attach to. When provided, all grants from this offer are tracked under the campaign for GGR reconciliation and reporting. Null = standalone offer.
game_id	String	Yes	Game identifier. <code>game_type</code> is derived server-side from the game's bonus support config.
rounds	Integer	Yes	Number of free rounds
bet	Number	Yes	Fixed bet amount per round

currency	String	Yes	ISO 4217 currency code
min_cash_out_coeff	Number	No	Minimum cashout coefficient (crash only)
settlement_mode	String	Yes	PER_ROUND (default) or AGGREGATED . Available values per game come from GET /games/{gameId}/bonus-support ; unsupported values reject with 1023 OFFER_SETTLEMENT_MODE_UNSUPPORTED . AGGREGATED bundles per-round wires into one grant-level BET + WIN/ROLLBACK pair – see bonus/aggregated-settlement.md .
bet_mode	String	No	ZERO_BET (default) or BET_FROM_WIN . Both supported with both <code>settlement_mode</code> values.
allow_multiple_per_player	Boolean	No	Allow multiple grants per player (default: false)

Cost control. Cost exposure for a free round grant is bounded by two independent mechanisms: (1) `free_round_balance` (or `rounds x bet`) caps the *promotional*

stake, and (2) the game-level max win cap (configured per game, applied at cashout) caps *each payout*. The theoretical worst-case payout from one grant is therefore approximately $(\text{free_round_balance} / \text{bet}) \times \text{game_max_win_per_cashout}$. There is no separate per-grant aggregate win cap.

Example

```
POST /offers/fixed-bet
{
  "offer_id": "crash-promo-1",
  "campaign_id": "spring-promo-2026",
  "game_id": "king_move",
  "rounds": 10,
  "bet": 0.50,
  "currency": "USD",
  "settlement_mode": "PER_ROUND"
}
```

Response:

The fixed-bet response includes `rounds` and `bet` — the operator's input — plus the computed `free_round_balance`.

```
{
  "result_code": 0,
  "data": {
    "offer_id": "crash-promo-1",
    "game_type": "CRASH",
    "rounds": 10,
    "bet": 0.50,
    "currency": "USD",
    "free_round_balance": 5.00,
    "grants_issued": 0,
    "created_at": "2026-04-01T04:21:48.324Z"
  }
}
```

Create Bet Range Offer

POST /offers/bet-range

The operator configures a total free round balance and min/max bet bounds. The player chooses their bet amount per round within the range.

Request Fields

Name	Type	Mandatory	Description
offer_id	String	Yes	Unique ID (idempotency key)
campaign_id	String	No	Campaign to attach to
game_id	String	Yes	Game identifier. <code>game_type</code> is derived server-side from the game's bonus support config.
free_round_balance	Number	Yes	Total freeround budget
min_bet	Number	Yes	Minimum bet per round
max_bet	Number	Yes	Maximum bet per round
currency	String	Yes	ISO 4217 currency code
min_cash_out_coeff	Number	No	Minimum cashout coefficient (crash only)
settlement_mode	String	Yes	<code>PER_ROUND</code> (default) or <code>AGGREGATED</code> . Available values per game come from <code>GET /games/{gameId}/bonus-support</code> ; unsupported values reject with <code>1023</code>

			OFFER_SETTLEMENT_ MODE_UNSUPPORTED . AGGREGATED bundles per-round wires into one grant- level BET + WIN/ROLLBACK pair — see bonus/aggregated-settlement.md .
allow_multiple_per_player	Boolean	No	Default: false

Cost control. Same mechanics as fixed-bet offers: `free_round_balance` bounds promotional stake; game-level max win cap bounds each payout.

Example

```
POST /offers/bet-range
{
  "offer_id": "crash-vip-range",
  "game_id": "king_move",
  "free_round_balance": 50.00,
  "min_bet": 0.50,
  "max_bet": 5.00,
  "currency": "USD",
  "settlement_mode": "PER_ROUND",
  "allow_multiple_per_player": true
}
```

Response:

The bet-range response includes `free_round_balance`, `min_bet`, and `max_bet` — the operator's input. No `rounds` field — the number of rounds depends on the player's bet choices at runtime.

```
{
  "result_code": 0,
  "data": {
    "offer_id": "crash-vip-range",
    "game_type": "CRASH",
    "free_round_balance": 50.00,
    "min_bet": 0.50,
    "max_bet": 5.00,
    "currency": "USD",
    "grants_issued": 0,

```

```
    "created_at": "2026-04-01T04:21:48.498Z"  
  }  
}
```

Delete Offer

```
DELETE /offers/{offerId}
```

Only allowed when the offer has no issued grants. Returns error code `2003` if grants exist.
